

TOOL SPRAWL- THE ANTITHESIS TO PRODUCTIVITY

Tool sprawl has increased as teams seek to make working from home easier and more productive.

TOOL SPRAWL BY THE NUMBERS

60 Average number of apps used by employees in enterprise companies

6.7M Number of business tools and productivity apps downloaded across iOS and PlayStore in March 2020

65% Percentage of organizations who are using more than 10 monitoring tools

TOOL SPRAWL IS AN ISSUE. IT CAUSES:

Network Complexity. It takes **3-6hrs** to pinpoint performance issues and the average cost of application failure can be up to **\$1M** per hour.

Loss of time. **82%** of employees lose one hour each day managing their tools.

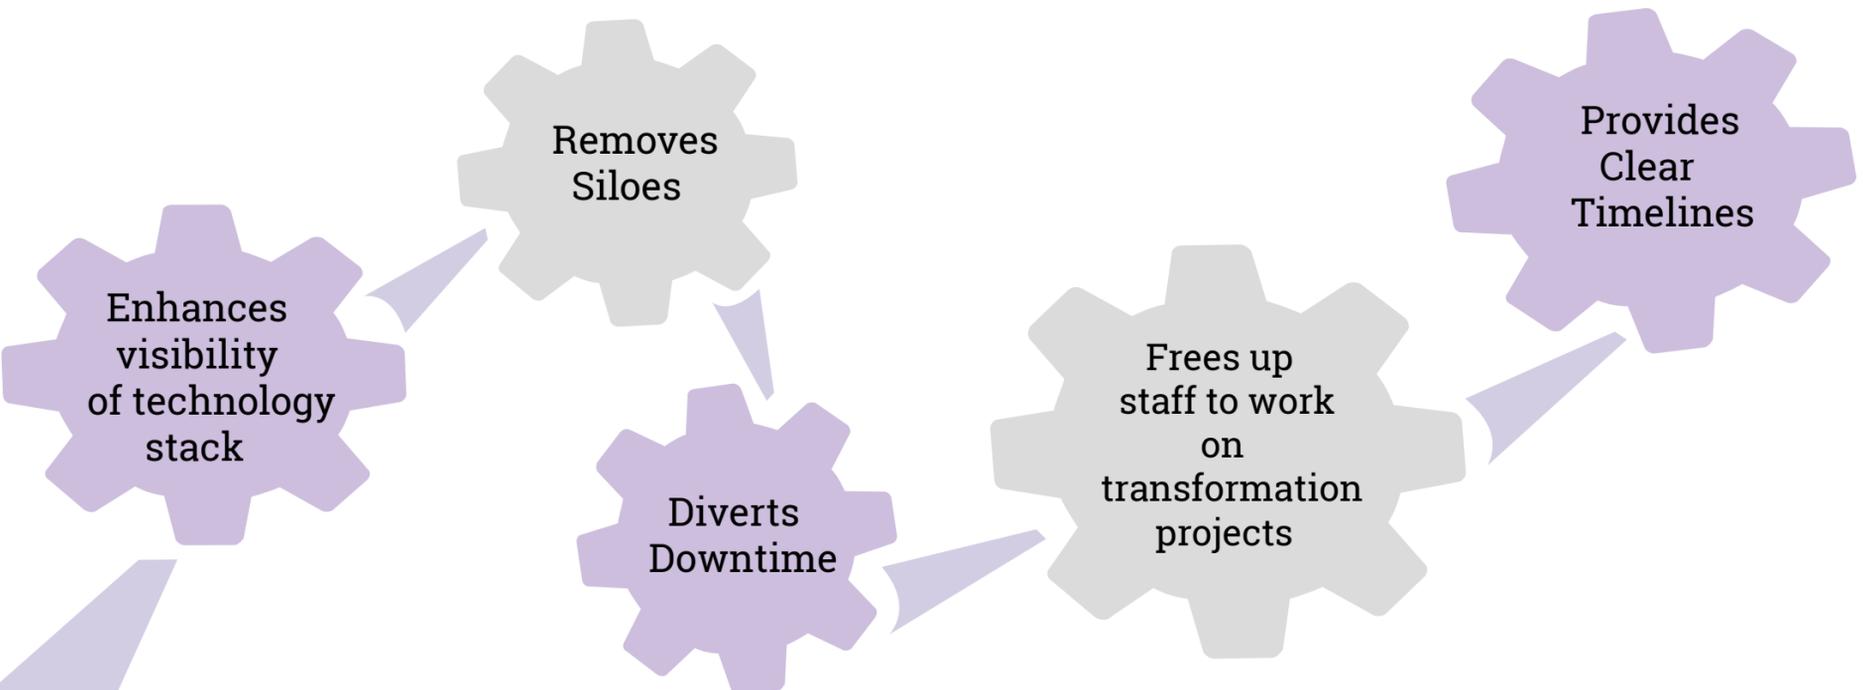

Decentralized systems and processes that don't integrate. IT teams spend **46hrs** per month in the war room troubleshooting scenarios.

A fragmented view. Stretched and under-resourced IT teams have no single version of the truth.

IT MONITORING VIA A SINGLE PANE OF GLASS IS CRUCIAL TO PRODUCTIVITY
